

Project Report: Digital Literacy Portfolio

Course: CSE0001 - Digital Literacy

Student Name: Dipesh

Registration Number: 25BSA10140

Branch & Year: B.Tech in Computer Science Engineering(cloud computing)

Date: March 28th 2026

1. Introduction

In the scenario given as per the Assignment, my mission as the Student Digital Ambassador is to guide my peers through the complexities of the modern digital landscape. This assignment serves as a comprehensive resource, focusing on professional identity, secure communication, and technical collaboration. This report documents the creation of these resources and my reflections on the digital skills required for a successful engineering career.

2. Task 1: Awareness Infographic (Module 1)

Tool Used: Canva

Reflection (150-200 words): For the first task, I designed an infographic titled "The Public Perception Roadmap." My goal was to emphasize that a "Digital Footprint" is a permanent record that begins the moment a student enters university. I focused on three pillars: defining digital literacy, the impact of public profiles on perception, and the basics of professional email structure.

While designing this, I found it interesting how much a single online interaction can influence a faculty member's or recruiter's view of a student. The challenge was condensing complex concepts into a "Clean & Minimal" visual format that my peers could quickly digest. I chose a blue professional theme to establish a sense of authority and trust, fitting for a Digital Ambassador.

3. Task 2: Student Digital Portfolio (Module 2)

Platforms Used: GitHub, LinkedIn

Reflection (150-200 words): In Task 2, I moved from theory to practice by establishing my professional architecture. I created and updated profiles on GitHub and LinkedIn to serve as my "Digital Business Cards."

I intentionally kept these profiles professional and minimal, focusing on academic milestones rather than personal data. This task taught me that digital literacy is a continuous process of curation. My GitHub will act as a living archive for my B.Tech projects, while LinkedIn will help me bridge the gap between campus life and the global professional network. I learned that maintaining these platforms early on is the best way to ensure a positive digital reputation.

4. Task 3: Coding & Collaboration (Module 3)

Tools Used: HackerRank, Google Forms/Sheets

Reflection (150-200 words): Task 3 demonstrated the dual nature of an engineer's digital life:

individual technical skill and team collaboration. On HackerRank, I completed a python challenge to familiarize myself with automated evaluation systems. This reinforced the importance of technical literacy in solving logical problems.

Additionally, I created a "Digital Literacy Awareness Quiz" using Google Forms. This allowed me to act directly as an Ambassador by testing my peers on topics like UPI safety and digital footprints. Linking the form to a Google Sheet showed me how cloud tools can streamline data collection. These collaborative tools are essential for the group projects I will encounter throughout my four-year degree.

5. Task 4: Professional Communication (Module 4)

Deliverables: Extension Request Email, Internship Inquiry, Social Media Checklist

Reflection (100-150 words): This module focused on the "language" of the professional world. I drafted two formal emails, ensuring they followed the "Gold Standard" of being short, well-structured, and polite. I realized that a clear subject line and a formal salutation significantly affect how a professor perceives a student's request. My social media checklist (5 Do's and 5 Don'ts) was designed to help my batchmates avoid common pitfalls, such as unprofessional "text-speak" or neglecting privacy settings on public platforms.

6. Task 5: Cybercrime Case Study (Module 5)

"For Task 5, I conducted a deep dive into Cyberbullying, which is currently the most prevalent cyber threat facing the youth community in India. My case study analyzes the hatred campaign against a person who people don't like, highlighting how psychological manipulation is often more dangerous than technical hacking.

In the 8-point 'Stay Safe Online' checklist. I prioritized the '1930' National Helpline and UPI PIN safety because these are immediate, life-saving pieces of information for my batchmates. Through this task, I learned that cyber-safety is a core pillar of digital literacy; it is not enough to know how to use a tool—one must also know how to defend against its misuse. This module has equipped me to help my peers transition from being vulnerable users to being 'cyberaware' digital citizens."

7. Conclusion

Building this Digital Literacy Portfolio has clarified my role as a Student Digital Ambassador. I have learned that being digitally literate is not just about using technology, but about using it responsibly, professionally, and securely. I am confident that these resources will help my batchmates navigate their engineering journey with a positive and protected digital presence.
